Transatlantic
Products for a healthier world

Your expert for all types of transfer and positioning aids for more than 40 years!

In the 1980s, we introduced rollboards and sliding boards to the German market. Today, they are the standard of care for lateral and seated transfers in all clinical and care settings. With easy handling, back-protecting working and optimal patient comfort, our Transaroll Boards and transfer boards facilitate everyday life in nursing and emergency services. As a manufacturer located in Germany, we guarantee the highest quality and short delivery routes. In addition, we are DIN EN ISO 13485 certified. Our medical devices have undergone the relevant conformity assessment procedures and thus bear the CE mark as per the Medical Device Regulation (MDR).

- **Protects the user's back**
- **Time-saving for more time for the patients**
- **Extremely hygienic thanks to ease of cleaning or the use of special protective covers**
- **Cost-effective due to long product shelf life**
- **Over 40 years of experience with transfer and positioning aids**
- **Dignified procedure for the patient**

About Transatlantic

Reliable cooperation is built on trust. For that reason, you need a partner you can trust. At Transatlantic, we have advised and supported our customers for over 85 years, and our mission is to create better individualized, more humane and efficient medical care for the benefit of patients and users. You will experience competent support and advice by our qualified medical product advisors when selecting products appropriate for you.

Benefit from our service

To make it easier for you to implement the Medical Devices Operator Ordinance, we recommend you our non-binding "Rollboard Check" service. As part of a safety check, we suggest to inspect and identify the functionality and proper condition of your rollboards. Training and instruction in proper handling are included. To make the work of the hospital staff even easier, they will receive a list of the rollboards with details of their condition and location. So they have the perfect overview of all of the various rollboards at their facility.

What does this mean? Standard, Mini, Ambu, Long, Special and Slim are the size units of our rollboards.
**Please note that the sizes of all rollboards may vary by +/- 3%.*

Standard: approx 180 x 50 cm.
Our most common size, since the boards can be used in all areas.

Mini: between 95-82 x 50 cm.
The boards are primarily used in gynecology and proctology, as they allow transfer even when the legs are elevated.

Ambu: between 86-75 x 45-40 cm.
Because of their narrow size, they are particularly suitable for short distances and transfers such as from narrow stretchers in emergency services. In addition, they are very space-saving when stored and can also be stored under a stretcher.

Long: approx. 195 x 50 cm.
Particularly suitable for large patients and for beds without disturbing the headboard and footboard.

Special: approx. 150 x 60 cm.
Particularly suitable for obese patients and transfers where a longer distance must be crossed.

Slim: approx. 120 x 40 cm.
Particularly suitable for stretcher transfers during emergency room admission and in CT.

For a smooth patient transfer, the heaviest points of the body—shoulders and pelvis—must be on the rollboard. That's why our Transaroll boards are most common in the Standard size. They can be used in all areas and allow for a comfortable transfer for both patient and user, since both the head and the heels rest on the board. But our portfolio also provides special solutions for the operating room with leg elevation (Mini), for the outpatient clinic and emergency room (Ambu, Slim), and for very tall or obese patients (Long, Special).

Basically, however, it is the width of the rollboard that determines its suitability for use. The wider the rollboard, the greater the distances that can be covered. Whether a rollboard is foldable or not has no influence on its transfer capabilities. They can only be stored in a more space-saving way, such as in our wall mount organizer.

Transaroll Silverboard* - the rollboard with the silver cover

The Transaroll Silverboard is the new standard for all lateral positioning and transfer applications. Due to its extremely stable core, the Silverboard allows for ergonomic and easy patient transfer.

Standard (foldable)
180 x 50 cm
Item no. 4500030

Special (not foldable)
150 x 60 cm
Item no. 4500034

Special (foldable)
150 x 60 cm
Item no. 4500033

Mini (not foldable)
95 x 50 cm
Item no. 4500029

Mini (foldable)
95 x 50 cm
Item no. 4500028

Key facts

Core
Strong polyethylene core

Cover
Hygienic gliding fabric

Ends
Integrated carrying handles, extremely stable

Load
350 kg max.

Overview of the benefits:

- ✓ Ideal for obese patients
- ✓ The only rollboard which makes it possible to lift a person
- ✓ No sharp edges, all corners are rounded off
- ✓ No magnetic parts, plastic parts or screws
- ✓ Radiolucent and suitable for MRI
- ✓ Transfer even with soft positioning mattresses
- ✓ No end strip (maximum hygienic safety)
- ✓ Can be disinfected using all common disinfection agents

max. 180 kg

For emergency services:

Emergency services carry out the initial care in emergency cases. Therefore, the procedures must flow in a rapid, hygienic and uncomplicated manner. Our products are ideally suited for this purpose since they are easy to handle and meet the highest hygiene and quality standards.

Covers - for fast, hygienic use

Our disposable covers and gliding covers are crafted for seamless patient transfers and enhanced hygiene. Designed to protect rollboards from contamination, these covers ensure quick, hygienic, and efficient handling in hospitals and emergency settings. The versatile gliding cover stands out for its ability to assist in patient movement independently, offering an all-in-one solution for diverse healthcare environments.

Overview of the benefits:

- ✓ Gliding cover enables patient transfers without a rollboard
- ✓ Disposable covers protect rollboards from contamination
- ✓ Perforated rolls and folds allow customizable sizing
- ✓ Anti-static options ensure safe handling
- ✓ Single-use design maintains hygiene standards
- ✓ Compact and versatile for easy storage and use

Disposable Gliding Cover

Due to the exceptional gliding properties, the cover is suitable for moving the patient in bed even without a rollboard.

Standard, 60 pcs.
(Roll, perforated)
180 x 53 cm

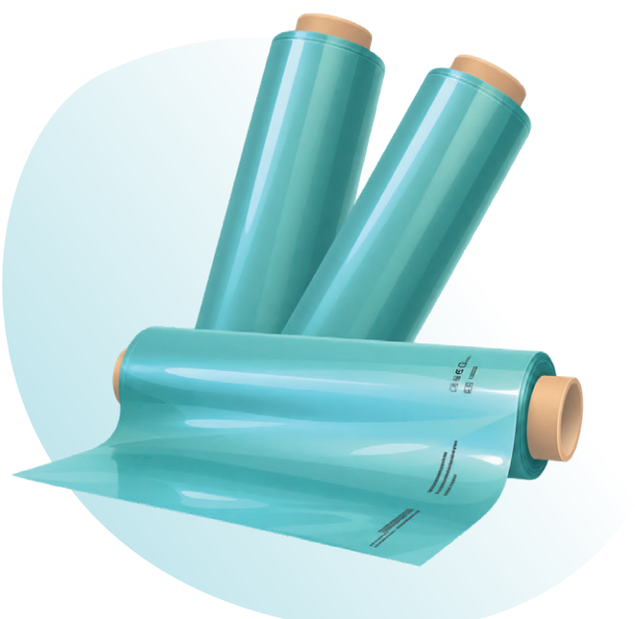
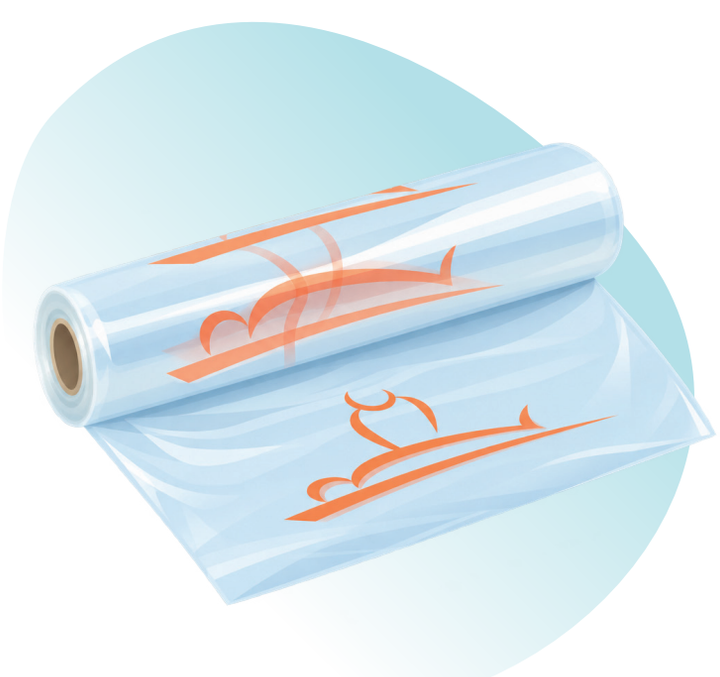
Item no. 4400200





Disposable Protective Cover

Protects the rollboard from possible contamination in individual cases.

Disposable protective cover, 150 pc, anti-static
(Roll, perforated)
54 x 100 cm
Item no. 4500126

Disposable protective cover, 50 pc, standard
(Cardboard, folded)
60 cm x 195 cm
Item no. 4500120

Disposable protective cover, 100 pc, anti-static
(Roll, perforated)
56 cm x 195 cm
Item no. 4500125N

Hygienic storage solutions for safe and clean storage of rollboards and covers

Our wall mounts offer innovative solutions for storing rollboards and protective covers in clinics and care facilities. Whether permanently mounted on the wall or flexible with a mobile suction hook - our products enable hygienic and ready-to-hand storage.

They have been specially developed to meet the requirements of the medical environment and make daily work easier.

Mobile suction hook for hanging up rollboards

Item no. 4400086

Dispenser for disposable protective cover and suspension for rollboards

Item no. 4400088

Overview of the benefits:

- ✓ Safe and clean storage of rollboards and protective covers.
- ✓ Space-saving storage.
- ✓ Simple installation of the wall bracket with or without screws.
- ✓ Flexible use thanks to mobile suction hooks for smooth surfaces.
- ✓ Quick access to rollboards and covers, when they are needed

Sheets - absorbent transfer aids

The revolutionary sheets are not only used for lifting, carrying and extricating patients, but are also ideal as waterproof padding and for transferring a patient in a way that protects the back.

Overview of the benefits:

- ✓ Padding and transfer cloth with handles in one product
- ✓ Safe and stable gripping due to multiple handles
- ✓ Can be used alone or together with our Transaroll boards
- ✓ Quick and clean use
- ✓ Disposable product

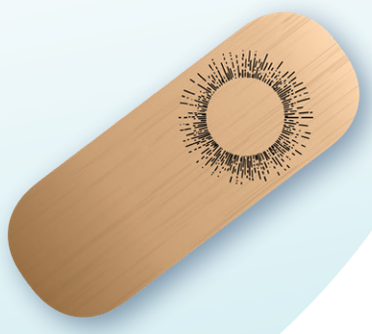
Transfer boards & accessories - transfer aids for the wheelchair

Our broad portfolio also offers useful aids for seated transfers. Our glide boards are ideally suited for all care areas in clinical and nursing care applications and facilitate ergonomic working.

Silver glider
Classic glider for all applications

Beasy glide board
Nursing glide board with turntable disc



meinHOLTZ transfer board
Design product with individual motifs

What is a transfer board?

Transfer boards make it easier to transfer mobility-impaired people. They form a bridge between the wheelchair and another surface, such as the bed, toilet or car seat.

Who can use a transfer board?

In principle, anyone who finds it difficult to transfer from a wheelchair can use a glide board. It supports an active transfer with the greatest possible independence. A glide board can also be a great support for relatives or people who help people in need of care, and can relieve strain on the back.

Silver Glider - the classic glider in all areas

The M and L Silver Gliders have a shape developed by therapists, which has proven its worth for many years. Due to a very smooth surface, the gliders minimize frictional resistance while anti-slip pads prevent the board from slipping away on the base.

M Silver Glider
67 x 22 cm
Item no. 4500414

L Silver Glider
85 x 25 cm
Item no. 4500415

Overview of the benefits:

- Easy transfer between wheelchair - car - bed
- Ease of handling due to large grab handle
- Exceptionally hygienic due to a smooth gliding surface without grooves
- Easy to disinfect with all common disinfection agents
- Discreet and unobtrusive design
- Load bearing capacity up to 180 kg
- CE-certified medical device with aid number

Transa Sit On Towel
30.5 x 58 cm
Item no. 4410525

The Transa Sit On Towel supports the glide of the silver glider and simplifies the transfer with bare skin.

Anti-Glider Pads

M silver glider
14.5 x 18 cm
Item no. 4500418

L silver glider
20 x 20 cm
Item no. 4500419

The anti-glider pads are barely visible and very durable. They can be replaced as needed.

Beasy – the patient glide board with the turntable disc

In order to avoid shearing and friction forces, the Beasy models rest securely on the same spot, namely the transfer disc. The transfer disc always glides and rotates smoothly even under the maximum load.

Overview of the benefits:

- ✓ Easiest transfer due to gliding turntable disc
- ✓ Easy transfer between wheelchair - car - bed
- ✓ Ease of handling due to large grab handle on the rear side
- ✓ Clearly specified transfer path
- ✓ Particularly suitable for heavy, elderly and/or frail patients
- ✓ Considerable convenience for users, even with the help of another person
- ✓ Easy to disinfect with all common cleaning agents
- ✓ Load-bearing capacity up to 200 kg
- ✓ CE-certified medical device

The meinHOLTZ Transfer Board - the design product with individual motifs

The meinHOLTZ is more than just a glide board. It combines the functionality and ease of use necessary for a transfer aid with appealing, modern designs. These traditionally rather plain aids are now available in great new designs. We were keen to develop a product that combines design and optimal functionality, and which is a pleasure to show to everyone who uses it.

Overview of the benefits:

- ✓ Modern designs from simple to colorful
- ✓ Easy transfer between wheelchair - car - bed
- ✓ A shape developed by therapists
- ✓ Minimized risk of slipping due to the gentle recess on the upper side
- ✓ Optimal stability due to multiple compressions
- ✓ Meets sustainability requirements due to wood as a renewable raw material
- ✓ Easy to disinfect with all common cleaning agents
- ✓ Load-bearing capacity up to 150 kg
- ✓ CE-certified medical device with aid number

Small DIY Tip:

Commercially available permanent markers can be exceptionally well applied to the glide board—For limitless creativity.

"The workload in the nursing professions is constantly growing. This also makes it all the more important to provide relief - for example, in the simple and ergonomic transfer and positioning of patients."

Kai Stolpe, General Manager

Our promise of quality to you

User-safety is the top priority for us. As manufacturer and distributor of medical devices, we have been inspected and are certified according to DIN EN ISO 13485. All of our Transaroll medical devices are CE-marked according to the Medical Device Regulation (MDR).
By placing our Rollboards, Transfer boards and further products on the market as medical devices, we guarantee that our products fulfill the essential safety requirements and the prescribed compliance procedures were performed. Our products therefore comply with all legal and regulatory requirements.
